

PRINT AUTOMATION

with Skyline Automate

| Problem

Document Management

Inside a busy Print Room tasks are **varied, sometimes quick,** sometimes repetitive, often complex requiring specialized skills or knowledge.

Skyline Automate is ideal for **repetitive tasks** and reducing manual touch points and as a result is ideal for removing inbuilt delays or pinch points in processes that previously required multiple steps/stages and individual actions.

| Solution overview

What Skyline Automate does

It can perform repetitive tasks, the Print Shop simply dropping the 'work' into predefined folders on their desktop and the automation would produce a new file back to a predefined destination

The folders can be configured to perform multiple tasks in sequence or individually

Merging multiple documents ensuring sections start on a front page.

Dynamic Tab placement or actual tab insertion into another document

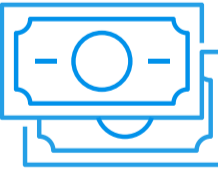

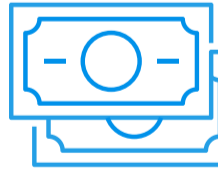

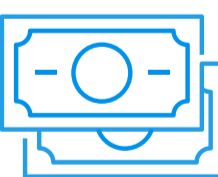

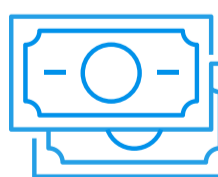

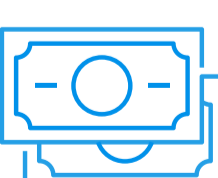

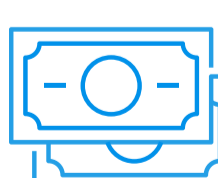

For example, combine a PDF with a front and back cover from a DAM, create a new PDF and email to a User for confirmation, whilst copying the new PDF to a print queue.

| Highlights

Your key takeaways

- Tasks can be built specific to your requirements
- Easy to change, update and modify tasks
- Workflow is fully flexible, can be integrated into existing work patterns
- Tasks can be integrated with other workflows
- Removes need for skilled/technical/bespoke inputs

| Cost benefit

-  One solution for multiple purposes
-  Enables DPA and BPA programs
-  Removal of old equipment
-  Removes error from complex processes
-  Vendor neutral.
Skyline Automate adapts with your infrastructure
-  Ability to grow and be used in other business areas and projects

| About Skyline Automate

Skyline Automate is a sophisticated scripting language that allows you to Automate parts of a business workflow (RPA) or replace an existing workflow process (DPA)
