

EDUCATION AUTOMATION

with Skyline Automate

Problem

Document checks

When a Skyline User uploads a file for production a bespoke “Job Ticket” is created that allows the Print room to see all the attributes and production requirements from the User.

A large educational establishment that uses third party printers for specific orders, stock, preprepared stock/forms means that there are many workflows a job can take to complete.

Multiple forms of payment and accounting options are offered which includes some papers and finishing supplied free. Ensuring all aspects are correctly represented means that each job had to be fully reviewed and detailed, then linked to the correct payment/billing run.

| Solution overview

What Skyline Automate does

Skyline Automate takes the data from Skyline and applies the rules around paper/stocks/input/order to quickly generate a full detailed invoice for the relevant client.

It also emails the bookkeeper of the school, the third-party print provider for stock replenishment.

As Skyline Web-to-Print allows prices to be updated post submission by the client, the Invoicing routine can highlight where the price to the User has been changed and flag those entries.

| Highlights

Your key takeaways

- Workflow is fully flexible, can be integrated into existing work patterns
- Tasks can be built specific to your requirements
- Tasks can be integrated with other workflows
- Easy to change, update and modify tasks
- Can act as intermediary between Production and MIS/Accounting
- Removes need for skilled/technical/bespoke inputs
- Eliminates delay between production and billing

| Cost benefit

 One solution for multiple purposes

 Allows existing systems to be used with new data

 Data can be sent to multiple system

 Reduction in Invoicing time

 Clarity of invoice materials

 Reduction in time spent checking invoices

| About Skyline Automate

Skyline Automate is a sophisticated scripting language that allows you to Automate parts of a business workflow (RPA) or replace an existing workflow process (DPA)
