

SKYLINE WEB SERVICES

Problem solved

Skyline addresses the print problems that are familiar to print rooms around the world.

Documents are sent in various formats, including email, USB and Hardcopy

Instructions for production are often confused, inconsistent or require further communication

People are printing to inappropriate devices or taking their work to external printers

You need better control over cost recovery, invoicing and reporting

Skyline provides a structured production workflow, ensuring all the relevant information is captured at the time of ordering, avoiding the need for further communication and allowing for fast order fulfilment and costs are minimised.

Making the right decision

Skyline + Print Room

When producing a document, big or small, simple or complex, employees often have available a choice of print devices and finishing options.

Making the right decision isn't always obvious and the wrong selection can be costly for your organisation.

Skyline helps avoid these costs by guiding the user to most appropriate option.

When the most efficient route is the central Print Room, Skyline offers the user an easy to use service for ordering those larger documents, catalogue items and customisable materials.

Solution overview

Skyline is simple to implement and is available in a range of competitively priced options

Skyline is suitable for both:

Commercial service providers

In-plant print rooms

Skyline Premium can be purchased for installation on your own network servers or is available as a Cloud (SaaS) service for a simple monthly fee.

All Skyline licenses deliver full functionality and allow for an unlimited number of users.

Solution overview

Skyline is simple to implement and is available in a range of competitively priced options

Whichever license you choose, setting up your Skyline Storefront and products is an easy to follow process that requires no specialized IT support. If there are areas in which you feel need additional support, we offer a range of supplementary professional services to guide you through the process.

SKYLINE Architecture is flexible to suit different environments and enables easy expansion to support growing markets

Skyline Web-to-Print is available as Skyline Cloud or Skyline Premium (in-house installation) and is supplied with the following applications:

Skyline PrintStation™

Print Room application that manages print production and keeps customers informed as works progresses.

Skyline CostManager™

Allows prices to be applied and maintained to services and media to generate real time quotations.

Skyline Publish™

Enables the design and maintenance of variable templates such as business cards, brochures and posters which can be personalised by the User or merged with imported data.

Skyline ProductManager™

Creates and maintains the products and services displayed on the web page

Solution overview

Your Storefront transforms with your business growth

Skyline has **portal architecture** which enables you to add further 'Storefronts' **as you grow and promote your services** to new markets and User groups.

Each **Storefront** can be **specifically designed for their audience**, enabling you to **customise services** to different User groups and providing them their own range of personal services.

Skyline Office is also available to support the identification and direction of work that should be submitted to the print room.

Complimenting **Skyline Premium** and working alongside fleet management software **Skyline Office** streamlines the process of print direction.

Using **intelligent print drivers** makes the process of submitting documents to the print room as simple as printing to a local device. The whole process is intuitive, fast and efficient.
